Foreword	vi	4.4	Failure of transmission shaft	52	
Preface	vii	4.5	Failure of crank of an overcurrent breaker	58	
1	Strength of materials and kinds of failure	1	4.6	Failure of discharge wires of an electrostatic space cleaner (ESC)	61
1.1	Importance of failure analysis	1	4.7	Failure of fastening screws (fatigue failure)	68
1.2	Failures can cause heavy losses	1	4.8	Environmental failure of fastening screws	104
1.3	Conditions for the occurrence of failures, and causes of failures	3	4.9	Failure of gears	114
2	Procedure in failure analysis	6	4.10	Failure of piping valves	136
2.1	Failure analysis items	6	4.11	Failure of pipeline before service	149
2.2	Precautions in actual failure analysis	7	4.12	Failures starting from welds in machines and equipment	157
2.3	Methods of removing metal deposits	8	4.13	Failures in rolls	177
2.4	Useful literature on failure analysis	18	4.14	Failures in rail joints	184
3	Initiation and propagation of fatigue cracks	22		Conclusion	192
3.1	Characteristics of fatigue failure	22	Appendix 1	Conversion of units	193
3.2	Initiation of fatigue cracks	23	Appendix 2	Models of fatigue cracks propagation	194
3.3	Propagation of fatigue cracks	24	Appendix 3	Notch factors for various kinds of rod specimen	195
3.4	Final fracture	28	Appendix 4	Typical fracture surfaces observed by SEM	199
4	Case studies and analysis of failure	30		Index	210
4.1	Failures occurring about use	30			
4.2	Failure of a crane head sheave hanger	33			
4.3	Failure of a wire rope	39			

Failure Analysis in Engineering Applications - Shin-ichi Nishida
